USA Staffing

Reporting and Analytics Release Notes

Stage Release Date: January 27, 2021

Production Release Date: February 3, 2021

Reporting and Analytics

New Hire (End of Day)

The USA Staffing Reporting and Analytics team is beginning the process of retiring the New Hire (End of Day) reporting package. This package was originally created as a high performing alternative to the New Hires namespace in the Staffing Reports package.

At this time, the New Hires area within the Hiring Data Warehouse package has been almost fully built out. This package offers far more fields encompassing the full staffing and onboarding process, enabling more complex and robust reporting. It is also updated more frequently than the New Hire (End of Day) package, yielding closer to real time data. Finally, it is built using a data warehouse structure, resulting in much better performance than the Staffing Reports package.

The first step in the process of retiring the New Hire (End of Day) package is to shut off the data loading job responsible for maintaining Notification data. The rest of the data in the New Hire (End of Day) package will continue to be loaded for now.

If you currently have reports using the New Hire (End of Day) data package that include Notification data, you will need to rebuild these reports using the Hiring Data Warehouse package to continue receiving up to date information. Please also consider updating all of your reports currently using the New Hire (End of Day) package, at your earliest convenience, to avoid any disruption.

We will provide further information, including a full retirement date for the entire New Hire (End of Day) package, as it becomes available.

Reports

- **Applicant List Report:** The Applicant List Report was modified. This report displays a list of all applicants and applicants by eligibility for one or more vacancies. The report was modified to include an additional page to list applicants by location and to add an optional prompt for application location.
