

## Enabling Enterprise Mode

Enterprise Mode in IE11 is disabled by default but can be enabled using one of the following two methods (both will likely require administrative permissions):

- o METHOD 1: Using Group Policy Editor (gpedit.msc)
- o METHOD 2: Using Registry Editor (regedit.exe)

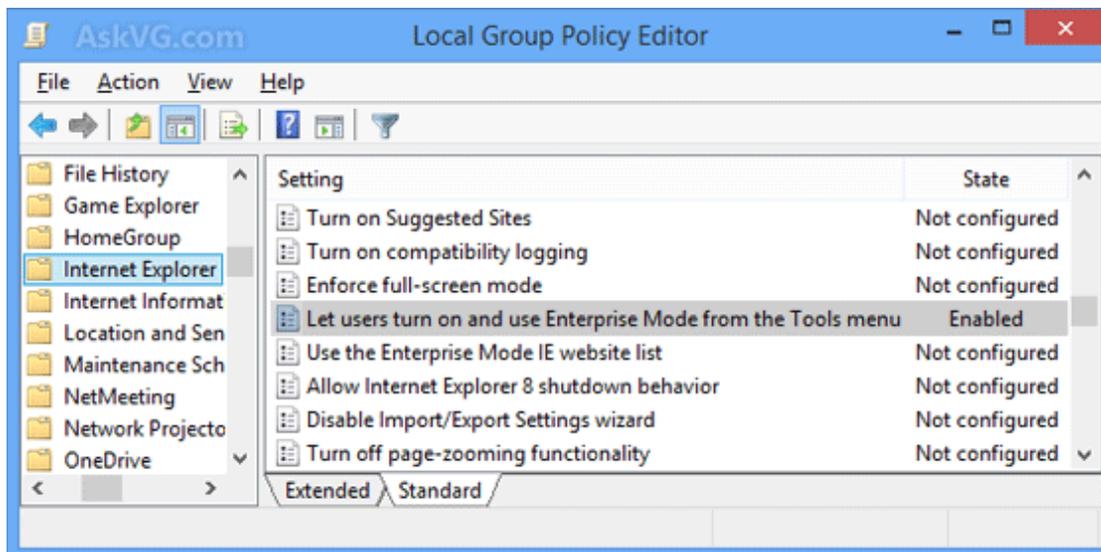

### METHOD 1: Using Group Policy Editor (gpedit.msc)

You can turn Enterprise Mode on in Internet Explorer 11 or later using Group Policy Editor.

1. Type **gpedit.msc** in RUN or Start search box and press Enter. It'll open **Group Policy Editor**.
2. Now go to:

Computer Configuration -> Administrative Templates -> Windows Components -> Internet Explorer

3. In right-side pane, look for "**Let users turn on and use Enterprise Mode from the Tools menu**" option. The option would be set to **Not Configured**. Double-click on it and set it to **Enabled**.

Apply the changes and now you can use Enterprise Mode feature in Internet Explorer 11 and later using "**Tools** -> **Enterprise Mode**" option in Menubar.

**NOTE:** To disable Enterprise Mode feature, again set the "**Let users turn on and use Enterprise Mode from the Tools menu**" option to **Not Configured**.

## METHOD 2: Using Registry Editor (regedit.exe)

As an alternative to the Group Policy Editor, you can also use the Registry Editor for the same task. Follow these steps:

1. Type **regedit** in RUN or Start search box and press Enter. It'll open **Registry Editor**.
2. Now go to following key:

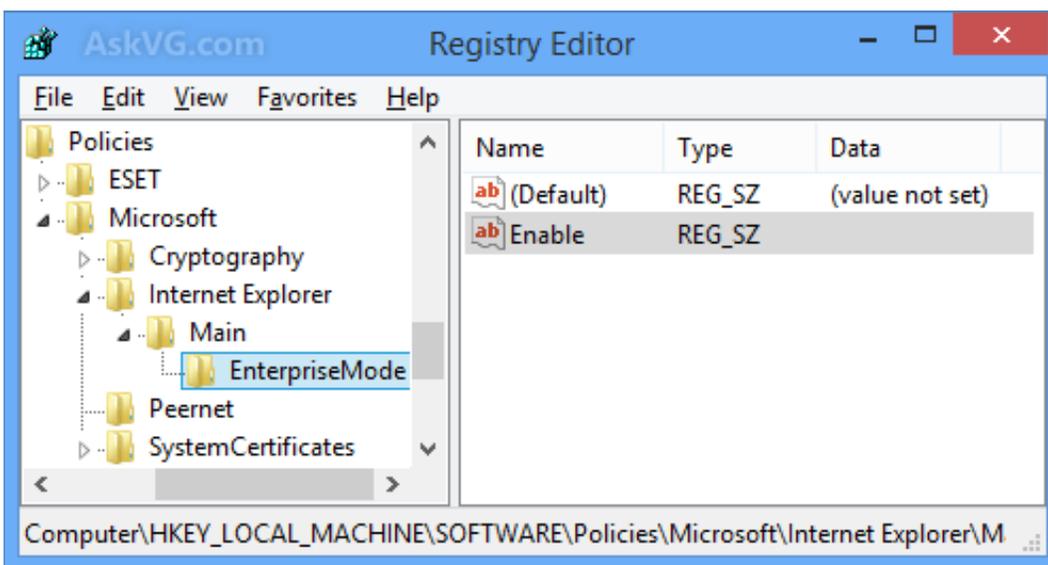

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\

3. Create a new key **Internet Explorer** under **Microsoft**, then create another new key **Main** under **Internet Explorer** key. Again create another new key **EnterpriseMode** under **Main** key.

The final key structure would be:

HKEY\_LOCAL\_MACHINE\SOFTWARE\Policies\Microsoft\Internet Explorer\Main\EnterpriseMode

4. In right-side pane, create a new string **Enable** and leave its value empty as shown in following screenshot:

That's it. Now you can use Enterprise Mode in Internet Explorer web browser from **Menubar -> Tools -> Enterprise Mode** option.

**NOTE:** To disable Enterprise Mode in future, delete **Enable** string created in step 4.

**NOTE:** If you can't see Enterprise Mode option, make sure you have installed all available updates for Internet Explorer in Windows Update.

## Accessing Enterprise Mode

Once enabled, you can use Enterprise Mode feature in IE11 or later by accessing the menu bar using **ALT** key and then click on "**Tools -> Enterprise Mode**" option. It shows an icon in address bar so that you can know if the current website is running in Enterprise Mode or not.
